Number	num Name
URL	url Name
Section Name	sect Name
Repeater	rep Name
Radio Button	radio Name
Toggle	toggle Name

DECISION NODES

Element Name: Question Format i.e Account found?

Label: Yes API: Yes_**Element_Name**

Default Outcome: No

VARIABLE RESOURCES

I/O variables	No suffix
Single variables	var Name
Collection variables	var Names
Record Collection Variable	rec Objects[_Specific_as_needed]
Single Record Variable	rec Object[_Specific_as_needed]
Constant	const Name
Formula	fx Name
Text Template	template Name
Choice	choice Name
Collection Choice Set	choices CollectionName
Record Choice Set	choices Objects
Picklist Choice Set	objectFieldName
Stage	stage Name

CREATE NODES

Create Object Create_Object[_Specific as needed]

GET NODES

Get Object Get_ObjectName[_Specific as needed]

DELETE NODES

Delete Object Delete_ObjectName[_Specific as needed]

"Specific as needed" implies that when there are multiple "Create" elements for an object, the API name (not the label) should include a suffix indicating the specific instance being referred to.
